

How Architecture Responded to Climate Change in 2019

Written by [Niall Patrick Walsh](#)

about a month ago

Throughout the last 12 months, the architectural community has responded in various ways to the Climate Emergency. From [innovative proposals that tackle the sustainable design of healthy cities](#), to [collective political action and lobbying](#), 2019 saw a continued mobilization of ideas, opinions, and actions on how architecture can be used as a tool to help the planet.

[As we did in 2018](#), we have reviewed and collated 12 months of reporting on the Climate Crisis to offer an overview of how the architecture community is responding to the challenge. In a new year, and a new decade, these developments will undoubtedly be accelerated as intensity to tackle climate change grows. For example, here at *ArchDaily*, we are continuing our [monthly topic series](#) by dedicating January to the “Climate Crisis,” offering readers further ideas, insights, and paradigms for using their skills for action
